## How corn syrup solids can help your baby's tummy

### What might be causing my baby's tummy ache?

It could be lactose—a sugar in milk or formula that gives babies energy. Some babies aren't ready to digest lactose yet, so it gives them gas.<sup>1</sup> Gas hurts! That could be why your baby cries after meals.

### Your baby's tummy

### How can corn syrup solids help?

Corn syrup solids are a plant-based, easy-to-digest option for babies who have a hard time digesting lactose. Formula with reduced lactose, like **Enfamil NeuroPro™ Gentlease®**, is designed to help your baby feel less fussy and gassy in as little as one day.<sup>2\*</sup>

### Are corn syrup solids safe for my baby?

Yes. Experts agree that corn syrup solids are safe and easy to digest, even for babies with allergies.

### Are corn syrup solids the same as high fructose corn syrup?

No. High fructose corn syrup is modified to turn glucose to fructose and is used to make soda, candy, and other sweets taste better. It's never used in Enfamil® formula.

\*Has ~20% the lactose of a full-lactose, routine, milk-based formula.
